

Operational Dashboards Added

Simple summary of the dashboard changes added to CDRIntel. This document only covers the five new dashboards and the small supporting UX changes.

1. Missed Call Recovery

Shows customer calls that came in but were not answered.

What was added:

- Missed inbound call count
- Unique missed callers and repeat missed callers
- Estimated callbacks found from later outbound calls
- Missed calls by hour and branch
- Recovery queue with caller number, attempts, last missed time, branch, staff, and callback status

Why it matters:

- Helps the team identify customers who may need follow-up and shows where missed-call risk is highest.

2. Branch Health Scorecard

Ranks branches using a simple health score from 0 to 100.

What was added:

- Healthy, Watch, and Critical status labels
- Best branch and weakest branch summary
- Branch ranking chart
- Detailed branch table with connect rates, missed inbound calls, no-response outbound calls, peak miss rate, and score

Why it matters:

- Gives leadership a fast view of which branches are performing well and which need attention.

3. Agent Coaching

Highlights agents who may need coaching or manager review.

What was added:

- Agents needing attention
- Agents with high missed inbound calls
- Agents with low outbound connect performance
- Talk-time outlier count
- Coaching priority chart and volume vs inbound connect chart
- Coaching queue with reason for review

Why it matters:

- Helps managers move from raw call data to clear coaching actions.

4. Peak Hour / Coverage

Shows when call pressure is highest and where coverage may be weak.

What was added:

- Busiest hour and worst missed-call hour
- Peak missed-call rate and active staff peak
- Hourly call volume and missed inbound charts
- Day/hour heatmap
- Branch peak-pressure ranking and hourly coverage detail table

Why it matters:

- Helps decide staffing, scheduling, and branch support during busy times.

5. Data Quality

Shows whether uploaded CDR data and branch mapping are clean enough for reliable analytics.

What was added:

- Unmapped CDR user count
- Duplicate record count
- Mapping coverage percentage
- Loaded date range
- Unmapped user list, duplicate record list, and mapping gap list
- Quality issue register with suggested fixes

Why it matters:

- Helps admins fix data problems before managers rely on the dashboard numbers.

Other Small Changes

- Added the five dashboards to the left navigation.
- Super Admin and Executive can see all new dashboards.
- District Manager can see the new dashboards scoped to their district.
- Staff only sees My Performance.
- Added shared filters for date, district, branch, and staff where relevant.
- Added mobile layout improvements for small screens.
- Fixed duplicate user-management markup that was creating duplicate IDs.
- Added missing handlers for duplicate logs, duplicate export, agent detail view, and Power BI CSV export.
